How to use this workbook

Each worksheet applies one day's anchor tool to your own case. Complete it during the session and finish it in your independent time. Keep earlier versions: revision is credited, so record what changed and why in the feedback box at the end of each worksheet. Tag every substantive claim in your Analyst's Ledger as fact, inference, assumption or hypothesis.

Competencies practised in this workbook: H1, H2, H3, H4.

Using AI tools. You may use AI tools to suggest structures, rival explanations or improvements to your writing. You may not use AI output as evidence. Every fact, figure, citation and description of an institution must come from a source you have checked.

Worksheet 8.1: Implementation plan

Day 18: Designing for delivery. Anchor tool: Theory of change.

Purpose. Show how your recommendation would actually be delivered: the causal logic, the people, the approach and the risks.

In brief.

- A theory of change makes the assumptions visible: mark each link evidenced or assumed.
- Name roles and decision rights; leave no activity without an owner.
- Choose plan-in-full or build-as-you-learn deliberately.
- Frontline responses and blocking actors belong in the risk register.

Worked example: Madhyapur (a stylised city; figures are illustrative). Madhyapur option B: inputs (funding, cooperative contract, sorting centres) to activities (pickers collect dry waste) to outputs (separate dry waste collection in pilot wards) to outcomes (households separate more; less to landfill). Key assumption: households respond to seeing separation respected. Approach: adaptive, ten-ward pilot with quarterly review.

Instructions.

1. Build the theory of change: inputs, activities, outputs, intermediate and final outcomes.
2. Mark every link as evidenced or assumed.
3. Fill the RAPID table for the key decision, with named roles.
4. Choose plan-in-full or build-as-you-learn, with reasons.
5. Write a risk register of at least five risks across five types.

Theory of change

Stage	Content	Link to the next stage: evidenced or assumed?
Inputs		
Activities		
Outputs		
Intermediate outcomes		
Final outcomes		

RAPID for the key decision

Role	Who (a named role)
Recommend	
Agree	
Perform	
Input	
Decide	

RACI for the main activities (optional)

Activity	Responsible	Accountable	Consulted	Informed

Delivery approach

Plan in full or build as you learn?	Why (predictability, capability, reversibility)

Risk register

Risk	Type	Likelihood	Impact	Owner	Mitigation

A thinker for your case: Carol Weiss and Michael Lipsky. Which links in your theory of change are assumptions, and what will frontline workers actually do with the plan?

My answer, in one sentence

Reflection.

1. Lipsky: what will the frontline worker in your plan actually do on a busy day?
2. Which assumption in your theory of change is most likely to fail?
3. Who has the power to block delivery, and is that risk in your register?

My reflections

Quality checklist.

- ☐ Every link is marked evidenced or assumed.

- ☐ Roles are named, not the government in general.
- ☐ No activity without an accountable owner.
- ☐ The delivery approach is justified.
- ☐ At least five risks across five types.

Hand in. Worksheet 8.1 by the start of Day 19.

Before the next session. Draft your full deck (10 to 12 slides) using the capstone structure; Gate 4 reviews it tomorrow. About 60 minutes.

Feedback and revision

Feedback received (peer or instructor)	What I changed, and why
