How to use this workbook

Each worksheet applies one day's anchor tool to your own case. Complete it during the session and finish it in your independent time. Keep earlier versions: revision is credited, so record what changed and why in the feedback box at the end of each worksheet. Tag every substantive claim in your Analyst's Ledger as fact, inference, assumption or hypothesis.

Competencies practised in this workbook: H5, I2, I4.

Gate 4. This workbook ends with Gate 4. Submit the revised worksheets listed on the final worksheet, with a revision note and an AI-use disclosure.

Using AI tools. You may use AI tools to suggest structures, rival explanations or improvements to your writing. You may not use AI output as evidence. Every fact, figure, citation and description of an institution must come from a source you have checked.

Worksheet 9.1: Indicator framework and draft deck

Day 19: Measurement and the pitch. Anchor tool: Indicator framework (indicator tree).

Purpose. Show how anyone would know whether your recommendation is working, and make the case in five slides.

In brief.

- Count outcomes, not just outputs.
- Give every indicator a source, a baseline and a frequency; disaggregate where averages hide.
- Link the riskiest assumptions to early indicators and review points.
- Recommendation first: five argument titles should tell the whole story.

Worked example: Madhyapur (a stylised city; figures are illustrative). Madhyapur option B: outcome indicators (households separating by ward type; dry waste reaching landfill), output indicators (dry waste collected by the cooperative; pickers with contracts), and an early warning on the key assumption (separation in pilot wards after three months).

Instructions.

1. Build an indicator tree from your final outcome down to measurable leaves.
2. For each indicator give type, source, baseline requirement and frequency; disaggregate at least one.
3. Link your riskiest assumptions to early indicators and review points.
4. Draft your full deck (10 to 12 slides) and your five-slide pitch.
5. Submit Gate 4 with a revision note and AI disclosure.

Indicator framework

Indicator	Type (input, output or outcome)	Source	Baseline	Frequency	Disaggregated by

Early warning

Assumption at risk	Early indicator	Review point and decision

Five-slide pitch: argument titles

Slide	Argument title
1. Recommendation	
2. Diagnosis	
3. Evidence	
4. Choice	
5. Delivery	

Revision note

What changed since Gate 3	Why

AI-use disclosure

Tool used	For what	How you checked the output

A thinker for your case: John Kingdon. Is there a window for this recommendation, and which stream is missing?

My answer, in one sentence

Reflection.

1. Kingdon: is there a window for your recommendation? Which stream is weakest?
2. Which of your indicators could be met while the problem stays unsolved?
3. What will you cut if you run short of time in the defence?

My reflections

Quality checklist.

- ☐ At least one outcome indicator.
- ☐ Every indicator has a source and a frequency.

- ☐ At least one indicator is disaggregated.
- ☐ The riskiest assumptions are linked to early indicators.
- ☐ The five titles tell the story on their own.

Hand in. Gate 4 (Worksheets 7.1, 7.2, 8.1 and 9.1, revised, with the draft deck) by the end of Day 19. Brief written feedback is returned before Day 20.

Before the next session. Rehearse your pitch twice, timed. Prepare answers to the five red team questions for your own case. About 60 minutes.
